Re: Lower Clevis Upgrade

There is an upgrade available for the lower mainframe clevis assemblies. This upgrade is being offered to assist with prevention of damage to the mounting bolts. The bolts can be damaged if there is rotational movement of the clevis. The upgrade consists of the addition of a jacking bolt and Belleville washers in the configuration shown below in order to reduce the risk of clevis movement. This upgrade is being offered through the Tesco Service Department as part of Tesco's Exchange Program. Upon receipt of a purchase order, a kit including new mounting hardware and mount plates will be supplied. When the original plates are returned a credit note will be issued. Please contact Jeff Salkeld 403-233-0757 for clarification or to arrange to purchase a kit.
